# ANNUAL BULL SALE

*Dear Friends and Cattle Breeders,*

*Welcome to our Annual Bull Sale*

Okay, we know the less said about the weather in Eastern Australia the better! Nundle is having the 'worst drought in living memory' according to the old-timers. However we are pleased to hear that some areas and particularly the NSW Coast are having a reasonable to good season.

Regardless of the extra work this has created, thanks to the team at Wombramurra we will have our bulls in their usual 'ready to work' condition on Sale Day. Many of the two year old bulls will exceed 850 kg at the sale.

This year we are offering 60 bulls in total ranging from 100% Black Simmental through to Sim/Angus. The ages of the bulls vary from 18 to 24 months.

A feature of this year's sale draft is the first offering of several new sires including Bonnydale Augustus L84, and Bonnydale Black Hawk H274, as well as Millah Murrah Emperor K184. We are delighted with the consistency and overall quality of their progeny. Proven sires such as TNT Tanker, CCR Cowboy Cut and Millah Murrah Right Time F226 are once again represented with more high quality bulls that we have come to expect from them.

We remind our Bull buyers that the Morse and Lamoureux families have repeatedly succeeded in the prestigious NSW Feedback Trial and other Trials. The progeny they have entered using our genetics highlights our breeding objective 'Profit Driven Genetics'. The result is a winning balance between daily weight gain and eating quality. That's a very profitable combination and the future for all cattle breeders.

All the sale bulls have undergone a comprehensive vaccination program including 7 and 1 (Leptospirosis), Vibrovax (Vibriosis) and Pestiguard (Pestivirus). It is the responsibility of the purchaser to maintain a booster program for continued protection.

You will again be able to purchase bulls on Auctions Plus and we will once again be supporting RUOK.

Whilst the offering of 60 bulls is less than last year rest assured you will be impressed with the overall quality.

We look forward to seeing you on Sale Day.

**RUOK?™**

**This catalogue is also available on our website: [www.blacksimmentals.com.au](http://www.blacksimmentals.com.au)**

**BUYERS PLEASE NOTE:** All care has been taken in the preparation of this catalogue. However the vendors and their agents do not accept any responsibility for errors or omissions. Prospective purchasers should satisfy themselves by inspection or otherwise as to the accuracy of the particulars.

## NOTICE TO BUYERS

### **DIRECTIONS:**

Wombramurra Sale Complex is 3km south of Nundle on the Crawney Road. Directions can be found on page 36 of this catalogue.

### **INSPECTION DETAILS:**

Cattle will be available for inspection from 10.00am. Presale inspections are encouraged by appointment with vendor.

### **ACCOMMODATION:**

The agents will be pleased to arrange accommodation and transport requirements for visitors.

### **LUNCHEON:**

A complimentary light lunch will be available.

### **THE SALE:**

- All lots will be sold in accordance with conditions of sale by auction in New South Wales.
- Potential purchasers must register with the selling agent prior to the commencement of the sale.
- All lots are sold exclusive of GST
- A "Buyers Instruction Slip" is provided at the registration desk. Written Transport instructions must be supplied on this slip at the conclusion of the sale.
- All accounts to be settled by Landmark.

### **TRANSPORT:**

Transport of the cattle is the responsibility of the purchaser. Reliable transport operators can be arranged through Landmark.

### **AGENTS REBATE:**

A rebate of 2% is offered to outside agents who introduce buyers to the selling agent in writing before the sale, and settle accounts within 7 days.

### **INSURANCE:**

Purchasers are encouraged to insure their new acquisitions. Landmark can assist with any insurance requirements.

### **HEALTH:**

- Drenched with Cydectin Pour On in July, 2018.
- Vaccinated with 7in1, Pestiguard, and Vibrovax (Booster July 2018).
- It is the responsibility for the purchaser to maintain a booster program for continued protection.

### **WOMBRAMURRA IS EU ACCREDITED**

#### **QUALITY ASSURANCE:**

- All bulls have been subjected to independent assessment for Fertility, Structural soundness and temperament.

- All bulls have been certified by Peter Brown of Bovine Breeders who performed a crush side semen test, internal and external reproductive palpation, and a visual inspection of structure and temperament.

### **FERTILITY GUARANTEE:**

Should any bull prove to be a non-breeder within 6 months of the date of the sale, we offer either a credit for the full purchase price, or your money refunded. It is the purchaser's responsibility to provide a certificate from a registered veterinarian before the 6 months verifying infertility, and that it was not the result of an illness, injury, or misadventure.

### **SEMEN RIGHTS:**

Wombramurra reserves the right to collect up to 200 straws from any bull in the sale for within herd use only. Any semen collection will be at our cost and the purchaser's convenience.

### **RECESSIVE RED GENE:**

All bulls have been tested for the red gene by DNA, or through pedigree deduction. The results are found above the EBV table on each lot. Homozygous Black means the bull is free of the red gene. Heterozygous black confirms the presence of a recessive red gene.

### **VISITOR SAFETY:**

Only experienced cattlemen and women should enter the saleyards. **PEOPLE ENTER THE SALEYARDS AT THEIR OWN RISK.** No children or prams are permitted to enter the saleyards. Please use "Common sense" whilst inspecting the bulls, remembering not to get too close and to always give them a wide area to get relief away from any pressure you or others may be applying to them.

### **NEW BULLS ARRIVING HOME:**

To decrease the chances of encountering any problems with your new bull, please ensure you unload him into your yards with a small group of steers or cows. Do not incorporate him into your existing bull group as the chance of injury will dramatically increase. Wherever possible your young bull should be mated as a single sire, or in a group of bulls the same age. It is critical that you regularly monitor the joining of your new sire, paying particular attention to any lameness or excessive swelling in joints, sheath or testicles. Early detection of injury or illness and removal of the bull can greatly increase recovery outcomes, and decrease the chances of poor conception rates.

## WOMBRAMURRA BLACK SIMMENTALS STUD HISTORY

Wombramurra Black Simmentals developed as the result of Peter Howarth's involvement with the Simmental breed since 1980 and the operation of large commercial cattle properties located at Nundle and Quirindi NSW.

Langton Gate Poll Simmentals was dispersed in May 2005 at which time it was the largest 'traditional' Simmental herd in Australia.

During his years in the industry Peter also operated a 5,000 strong commercial cow herd and he therefore understands the importance of breeding and selecting the right bulls for the commercial cattleman's needs. Because of the impact calving ease, fertility, growth, carcass quality and crossbreeding have on 'net profit' it's not surprising that Peter turned his attention to Black Simmentals in 2004 when he imported the first such embryos into Australia from Montana, USA.

Black Simmental deliver more marbling, no eye cancers, polledness and a smaller framed Euro resulting in easier calving, earlier maturity and low maintenance cows. The outstanding maternal, growth and higher yield traits for which Simmentals are famous have been retained. Of major importance is that the progeny will grow quickly are generally black and when crossed with British breeds generate increased yield and weight.

Our 'Profit Driven Genetics' will supply the cattle industry with these excellent Black Simmentals which will increase profits for our clients. We have been fortunate in establishing a close association with the Butcher family who operate the Gateway Simmental Stud in Montana, USA. They have been breeding Black Simmentals since 1989. It is a great bonus for Australian cattle breeders that we continue to have access to the best Gateway genetics after so many years of careful selection by them. We also use other carefully selected genetics in our stud.

Since 2004, we have undertaken a large embryo and AI programme and now have a 400 strong female herd of various grades from which to breed the 'new Simmental' bulls for our clients.

In 2005 Peter and Judy entered into a partnership with Andrew and Trudy Chapman who are extremely good judges of livestock and this has been a great success.

In 2015, 2016 and 2017 cattle breeders using a Wombramurra Black Simmental crossed with an Angus entered pens of steers in the prestigious NSW Spectacular Feedback Trial achieving regular success. This included Grand and Reserve Champion's on no less than two occasions. Also in 2016 two pens featuring Wombramurra Black Simmentals achieved Grand and Reserve Champion's in the 70 Day section of the RNA Paddock to Plate competition. The significance of these results is that success depends on a balance between DWG and carcass merit. The Black Simmental/Angus Cross is repeatedly delivering these outstanding results which is so important to the commercial cattleman's profit.

At our 2017 Bull Sale the record price for a Black Simmental was broken twice by both Tony Horwath from Mungallala who paid \$28,000 for a GW Lucky Man 644N son and David and Ben Wirth from Glenn Innes who paid \$29,000 for a TNT Tanker U263 son.

In November 2016 Wombramurra purchased the adjoining property 'Kelso' comprising 1860 acres which has meant that we can expand our breeding program and offer more bulls at competitive prices at our Annual Sale.

*Profit Driven Genetics*

## SIMMENTAL GROUP BREEDPLAN

### **EBV FOR BIRTH WEIGHT**

Birth weight is a major factor in calving difficulty. Use EBVs to select against birth weight if dystocia is a problem. The lower the EBV the lighter the calves are expected to be.

### **EBVS FOR 200-DAY GROWTH AND MILK**

Vealer producers should place emphasis on the 200-day growth and milk genes. If the bull is to be used as a terminal sire, growth is most important. If a bull is to be used to breed replacement heifers, and superior milking and mothering ability is required, then consider the milk genes with the EBV for milk (kg). The estimate in kg milk is not the yield of milk of the dam, but the growth of the calf due to more milk and better mothering of the dam.

### **EBV FOR 400-DAY WEIGHT**

400-day weight EBVs are a measure of the animal's ability to grow to 400-days-of-age (can be measured from 301-500 days). It should be used by producers who wish to turn off yearling cattle.

### **EBV FOR 600-DAY WEIGHT**

600-day EBVs are computed for growth to 600-days-of-age (can be measured at 501-900 days). It is the best prediction of an animal's ability to grow onto maturity, hence it is important for the heavy steer producer.

### **CARCASE TRAITS**

These traits are calculated from both live scan and actual carcass data and are adjusted to a standard steer carcass weight of 300kg.

### **FAT DEPTH EBV (RIB AND RUMP)**

Measured in millimetres at either 12/13 rib or P8 sites. As these EBVs increase, the progeny can be expected to fatten more easily but carcass yield may decline.

### **RETAIL BEEF YIELD (RBY%)**

The percentage of retail cuts compared to total carcass weight. Related to EMA and Fat Depth and Weight EBVs.

### **INTRA MUSCULAR FAT (IMF%)**

The percentage of fat to muscle in the eye muscle. Used as a more precise measure than Marbling Score.

### **EYE MUSCLE AREA (EMA)**

EBVs are relative to the breed average EBV of +2.5 sq.cm. A larger EMA EBV (sq.cm.) means more muscling and generally higher carcass yield relative to carcass weight.

### **GROUP BREEDPLAN**

Simmental Group Breedplan uses all the information on the individual from within the herd plus all performance information from relatives in other Group Breedplan herds. The EBVs in all herds relate to a common base. This increases the accuracy of the data, as well as allowing comparison of the genetic merit of the animals from different herds (across herd) within the group.

### **SUMMARY**

Remember the profit rule in buying bulls on their EBVs. Use the EBVs closest to your production system. Buy the bulls with the best EBVs your budget can stretch to, after you have taken structural soundness into consideration. It is important to relate each bull's EBVs to the current breed average.

### **SIMMENTAL GROUP BREEDPLAN**

The Breedplan values in this catalogue were calculated in the July 2018 Simmental Trans Tasman Group Breedplan evaluation unless otherwise stated. Each reported trait shows an EBV and its Accuracy level.

The **EBV** (Estimated Breeding Value) provides the best current estimate of the bull's true genetic merit for that trait, relative to the overall base for the Simmental breed. It indicates how his progeny should perform relative to those of other bulls in the breed.

The **Accuracy** indicates how well an EBV predicts the true genetic worth of an animal. The Accuracy of an EBV will be higher for traits with a higher heritability and will increase as more performance information on an animal and its relatives becomes available.

The accuracy of an ABV is reported as a percentage. EBVs with high accuracy will change less than EBVs of low accuracy when more performance records are analysed.

**High Accuracy Above 85% – Medium Accuracy 75% to 85% – Low Accuracy Below 75%**

This abbreviated Percentile Table can be used to see where a bull's EBVs fit within the breed's current genetic levels. For example, a bull with a 400 day EBV of +39 fits within the Top 30% for that trait relative to all 2016 drop calves.

<b>EBV Percentile Table (abbreviated) Simmental Animals born in 2016</b>										
Percentile Band	Birth Weight (kg)	200-day Weight (kg)	400-day Weight (kg)	600-day Weight (kg)	Milk (kg)	Eye Muscle Area (sq. cm)	Rib Fat (mm)	Rump Fat (mm)	Retail Beef Yield (%)	IMF (%)
Top 10%	- 2.1	+ 27	+ 49	+ 64	+ 13	+ 4.2	+ 1.6	+ 1.7	+ 1.6	+ 1.1
Top 30%	+ 0.1	+ 22	+ 39	+ 49	+ 10	+ 3.2	+ 0.6	+ 0.5	+ 1.1	+ 0.4
Average	+ 0.7	+ 18	+ 33	+ 41	+ 8	+ 2.5	+ 0.3	+ 0.2	+ 0.5	+ 0.3

Simmental Breedplan evaluations are undertaken by ABRI from data supplied by breeders. Neither ASBA nor ABRI oversee or audit the collection of this data. For more details on Breedplan and how EBVs and Accuracies are determined, visit the Simmental Australia website at [www.Simmental.com.au](http://www.Simmental.com.au) or contact Felicity Reeves - Telephone 6773 2714 - Fax 6772 5376.

## SIMMENTAL GROUP BREEDPLAN SELECTION INDEXES

Simmental selection indexes are calculated for four market specifications, namely, Domestic Maternal, Export Maternal, Northern Terminal and Vealer Terminal. These indexes relate to typical Simmental herds in temperate Australia targeting these specifications.

Indexes are reported as an EBV, in units of relative earning capacity (\$s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a sustainable cow herd. Therefore, a proportion of heifers bred in the herd may be retained for breeding.

The indexes are derived using the BreedObject technology. More information on this technology is available from the BreedObject website.

**Domestic Maternal Index** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the domestic supermarket trade. Steers are either finished on grass or grain (e.g. 60-70 days). Steers are marketed at 430 kg live weight (240 kg HSCW and 6 mm P8 fat depth) at 14 months of age. Daughters are retained for breeding.

**Export Maternal Index** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the export trade. Steers are finished on grain (e.g. 120 days) and marketed at 700 kg live weight (380 kg HSCW and 8 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

**Northern Terminal Index** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia (e.g. Brahman cows) targeting the export trade. Steers are finished on grass and marketed at 630 kg live weight (345 kg HSCW and 12 mm P8 fat depth) at 28 months of age. This is a terminal production system therefore no daughters are retained for breeding.

**Vealer Terminal Index** - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the vealer trade. Vealers are weaned and sold at 8 months of age weighing 350 kg (195 kg HSCW and 6 mm P8 fat depth). This is a terminal production system therefore heifers are not retained for breeding purposes.

Note that \$Index Values for individual animals are sensitive to the assumptions used in the BreedObject analysis to calculate the relevant selection index. More information is available on the weightings used in the Domestic Maternal, Export Maternal, Northern Terminal and Vealer Terminal Indexes.

## Understanding Breedplan for multi-breed Animals

EBVs for Wombramurra Black Simmental/Angus are comparable to EBVs of Purebred Wombramurra Black Simmentals and the general Australian Simmental population. As a result we have noticed some of the Black Simmental/Angus growth figures are low, and in some instances are a negative value. This does NOT suggest that these animals will not grow, but indicates that they possess genetics for more moderate growth when compared to the purebred Simmentals. Below is an example of the Estimated Genetic difference of a Purebred Simmental with a positive 600 Day growth EBV, and a Simmental/Angus with a negative 600 Day growth EBV.

Purebred Bull with 600 Day Growth EBV of +16

Sim/Angus Bull with 600 Day Growth EBV of -8

On comparison of the 600 Day Growth EBVs above, the genetic breeding difference of the two sires is 24 kg. As the sire only contributes half the genetic profile to its offspring, the genetic breeding difference of the two sires equates to 12 kg. Hence, the 600 Day genetic value of the Sim/Angus bull is 12 kg less than the Purebred bull per offspring. This clearly indicates that the Sim/Angus bull has more moderate growth than the Purebred bull however with only a 12 kg 600 Day genetic growth difference, the Sim/Angus bull has suitable growth for the commercial breeder. We encourage the use of the Selection Indices as a balanced guide to the economic value of the genetics carried by these multi-breed animals.

# The Agents That Get Results

## Scott and Amanda Waters

This family owned business based in Tamworth is a proud supporter of the Nundle community. We specialise in marketing large scale properties, lifestyle and medium size properties.

We pride ourselves on:

- Outstanding service and advice to our clients in all aspects of rural property
- Leading the way in marketing rural properties
- Marketing properties in all areas
- Proven expert advice on the sale and purchase of rural property
- Having a global network
- Giving clear information and providing management assistance

*We would like to congratulate the Howarth and Chapman families with the quality line up of bulls they are offering for sale and wish them all the best with the result. Also for all involved, congratulations with your purchases and hopefully a great season is just around the corner.*

Scott Waters  
0428 860 435

# Strong growth, market options with SimAngus

BY RUTH SCHWAGER

USING SimAngus bulls is allowing James and Sal Morse, Wongalee, Molong, to meet a range of markets with their progeny.

The 1400-hectare property is currently running about 250 pregnant females and 250 weaners, but it would usually handle between 500 and 600 breeders.

"Since the start of December we've offloaded nearly 1400 head of cattle," Mr Morse said.

"The breeders never got back to full capacity since the last drought but we've also been trading cattle."

The base herd was Shorthorns, but Angus bulls started the shift to crossbreeding about 15 years ago. SimAngus bulls have been used for the past five years, with genetics sourced from Wombramurra stud at Nundle.

SimAngus cattle are allowing Mr Morse's cattle to reach a range of markets.

"With the Shorthorns, we ran into trouble if we had to sell them as weaners, but with SimAngus, we're getting a black premium," he said.

The Morses chose Wombramurra bulls as the stud has similar breeding principles.

Mr Morse looks for similar bloodlines, placing emphasis on the females, and said he likes having the option to buy yearling bulls.

"Andrew (Chapman, Wombramurra stud principal) is pretty hard on his females in terms of temperament and fertility, and a lot of his cows run in the hills, so the structure is always good," he said.

**CROSSBREEDING SUCCESS:** James and Sal Morse after their first win in the 2015 Beef Spectacular Feedback Trial. The couple uses Wombramurra SimAngus bulls in their commercial operation.

"We're very strict on fertility. If they don't raise a calf they're sacked, and if they're not in calf at 14 months to calve as a two-year-old, they're out. We also have pretty tight joinings - heifers for 22 days at three per cent and cows, in a good season, at 30 to 35 days, but we've gone to 45 days now with the dry conditions. We also join the heifers a bit earlier to give them a bit more time to be ready for their second calf."

Steers are usually grown out to feeder weights, going to JBS Caroonia or Riverina, with heifers going to a local feedlot for the supermarket trade.

Most of the country is improved pastures, with about

Andrew (Chapman, Wombramurra stud principal) is pretty hard on his females in terms of temperament and fertility, and a lot of his cows run in the hills, so the structure is always good.

**James Morse, Wongalee, Molong**

20pc cropping, including oats, brassicas and vetch in a multi-species mix, then sorghum, millet and cowpeas over summer.

Trade cattle and weaners are grazed on crops, while the females are on improved pastures including fescues,

phalaris, cocksfoot and clovers, as well as native red grass country. The cows are also used to clean up crop stubble.

"If we've got to sell them as weaners, we can, but we can also feed here, so this year we've had most of the cattle

locked up for the past two months, and they're going well," Mr Morse said.

"We want to have them gone by 16 months, once they're at 400 kilograms to 450kg, and gaining 1.5kg a day."

That strong weight gain has led to success in the Beef Spectacular Feedback Trial.

The Morses made a business decision to participate in the feedlot performance and carcass competition a few years ago, as a way to benchmark their cattle.

In their first year, 2015, they were outright winners of the competition, and in 2017, their second time in the feedback trial, the Morses won the carcass section

and came fourth overall.

The 2018 team of steers - all sired by Wombramurra J161 - took out the feedlot performance section and the overall competition. The Morses are the first producers to win the overall competition twice in the trial's 10-year history.

"That was the most exciting thing for us, because we sire identified them with a DNA test, so we've got some practical data out of that. The odds of having the whole team sired by the sale bull are slim, but it's pretty exciting, because we can use that data to make decisions. If we had to destock all females, I'd know which two bulls I needed to keep."
