

ALBANY MULTI-BREED BULL SALE

TUESDAY, MARCH 26, 2024

38 BULLS

Sale commences 1.30pm

Mount Barker Regional Saleyards

Mount Barker, WA

Naracoopa Simmental , Denmark	2 Simmental Bulls
Stirling End Black Simmental, Gnowellen	4 Black Simmental Bulls
Shannalea Limousin, Youngs Siding	3 Limousin Bulls
Ponderosa Angus, Albany	7 Angus Bulls
Ballawinna Angus, Albany	11 Angus Bulls
Zakanaka Angus, Youngs Siding	4 Angus Bulls
Barker High Murray Grey, Mount Barker	3 Murray Grey Bulls
Great Southern Hereford, Youngs Siding	4 Hereford Bulls

Contact: Jai Newman 0427 920 929
(Ballawinna, Zakanaka, Naracoopa,
Shannalea, Great Southern Hereford)

Dean Wallinger 0428 818 400
(Ponderosa, Barker High)

Nigel Hawke 0429 479 467
(Stirling End)

Wayne Mitchell: 0429 447 144 David Lindberg: 0439 443 497 Zac Mostert: 0487 254 861

SALE TO BE INTERFACED ON

All sale bulls semen tested, paddock prepared and ready to work

ON THE SPOT FAECAL EGG COUNTS

Available now at Elders Albany & Mount Barker.

Parasight is a proven automated faecal egg count (FEC) method. The Parasight System provides instant emailed results as a digital image of parasite eggs with quantitative results.

- On the spot faecal egg count in minutes
- Test before you drench!
- Testing available for sheep, goats, horses and now cattle

For more information contact
Elders Albany 9842 7900
Mount Barker 9851 3200

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVs)

An Estimated Breeding Value EBV is an estimate of the genetic value of that particular animal for each trait measured.

Accuracy

An accuracy is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Accuracy below 75% should be considered low.

Birth

GL: Gestation Length EBV (days) is based on AI records. Lower (negative) GL EBVs indicate shorter gestation which is associated with lower birth weights and easier calving.

BWT: Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over helpers.

Fertility

SS: Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate larger scrotal size. SS is also positively associated with female fertility.

Growth

Milk: 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200 and 400 day weight of their calves.

200: 200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400: 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600: 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

MWT: Mature Cow Weight EBV (kg) is an estimate of the genetic difference in cow weight at 5 years of age. Moderate EBVs are generally more favourable.

Carcase

CWT: Carcase Weight EBV (kg) estimates the genetic difference in carcase weight at a standard age of 650 days.

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcase. More positive EBVs indicate larger eye muscle area and therefore higher retail beef yields.

RIB: Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RUMP: Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg
